

## GeIL launches the EVOX II and EVO X II ROG-certified DDR4 RGB Gaming Memory to include 3<sup>rd</sup> Gen AMD Ryzen™ platform support

Available from 2400MHz to 4133MHz.  
Push RGB gaming DRAM to the next level.

**Taipei, Taiwan - July 17<sup>th</sup>, 2019 – GeIL, Golden Emperor International Ltd.** – one of the world's leading PC components & peripheral manufacturers released new additions to their EVO X and EVO X ROG-certified RGB Gaming Memory today. The new EVO X II and EVO X II ROG-Certified inherit their previous generation, and provide an advanced modder-friendly “cableless RGB illumination design” for offering a fascinating RGB lighting effect without hassles of power cable management. Manufactured with outstanding components, the EVO X II dedicated to unlocking hidden overclocking ability and comprehensive compatibility across the latest 3rd Gen AMD Ryzen™ and Intel platforms. GeIL EVO X II ROG-certified RGB Gaming Memory perfectly supports ASUS AURA lighting control app, when paired with most ASUS ROG motherboards, an automatic performance boost will be enabled for a better overclocking experience.

The EVO X DDR4 series is one of the first RGB DDR4 memory modules in the industry, and it brought the series tremendous praise from gamers and PC enthusiasts around the world. The new EVO X II and EVO X II ROG-certified equipped with “cableless RGB illumination design” offering RGB lighting without power cables or the need for advanced cable management. The EVO X II is available in a new stealth black and frost white design and features high-quality aluminum for better heat dissipation and extra stability.

GeIL EVO X II ROG-certified RGB gaming memory continues the excellent reputation of the previous generation by offering synchronized RGB LED illumination with ASUS AURA RGB, GeIL EVO X II ROG-certified has been qualified to work with most ASUS ROG motherboards for maximizing both speed and compatibility. It perfectly supports the latest ASUS AURA RGB lighting control APP without any cables connected to the motherboard. Besides, it automatically synchronized with ASUS ROG graphics cards and other RGB UI compatible components.

Backed by the limited lifetime warranty, the GeIL EVO X II is available in frequencies of 2400MHz and scales up to 4133MHz. For fully embrace with the latest 3rd Gen AMD Ryzen™ platforms, GeIL is also releasing EVO X II AMD optimized edition. Most significantly, this AMD edition has been strictly verified across a large number of AMD X570 AM4 motherboards and 3rd Gen AMD Ryzen™ processors to guarantee the best compatibility and better gaming experience for all AMD builders.

### About GeIL

GeIL – Golden Emperor International Ltd. – one of the world's leading PC components & peripheral manufacturers that concentrate in making the most innovative products, from memory modules to gaming peripherals for PC enthusiasts worldwide

Established in 1993, GeIL has soon become one of the most trusted memory professionals in the industry. In the year 2000, with the vast knowledge of tweaking and producing some of the world's fastest DRAM modules, GeIL shook the PC enthusiast market and changed it for the better. The introduction of the first ever memory heat-spreader, the dual-channel packaged memory kit and lifetime warranty are all innovative concepts that GeIL introduced in the PC DIY market. GeIL has focused on perfecting the technologies of IC testing, memory burn-in and quality assurance for memory products across all segments of the market. GeIL memory is now trusted and distributed in over 50 countries worldwide.
